

WATER REPORT – August 14, 2018

Natural flow in the Teton River has been approximately 500 cfs, sufficient to fill the 1884-06-01 priority for Teton River water rights. Gains below the Teton Island Feeder Canal allow North Fork Teton River junior diversions below the Teton Island Feeder Canal to divert up to 1891-06-01 priorities. Teton River tributaries in the Upper Teton Valley that are no longer connected to the Teton River are on their own futile call priorities.

Willow Creek natural flow is approximately 21 cfs, sufficient to fill the 1881-04-01 priority for Willow Creek water rights. The 1900-10-11 priority is partially filled for Snake River diversions below Blackfoot. The 1891-06-01 priority is being filled for all other areas of the Henrys Fork, Falls River, and Snake River above Blackfoot.

Priorities senior to 1891-12-14 have not yet been cut on the Henrys Fork and Snake River so far this year. There have been a few occasions over this past week whereby Water District #1 has been projecting priority cuts earlier than 1891-12-14, however, natural flow has not dropped as quickly as anticipated and some senior diversions have not been diverting their full senior water rights. Last year's priority cuts above Blackfoot reached their low point during the last week of August. Priorities are expected to continue to drop over the next two weeks depending on the natural flow supply and diversion demand from senior canals.

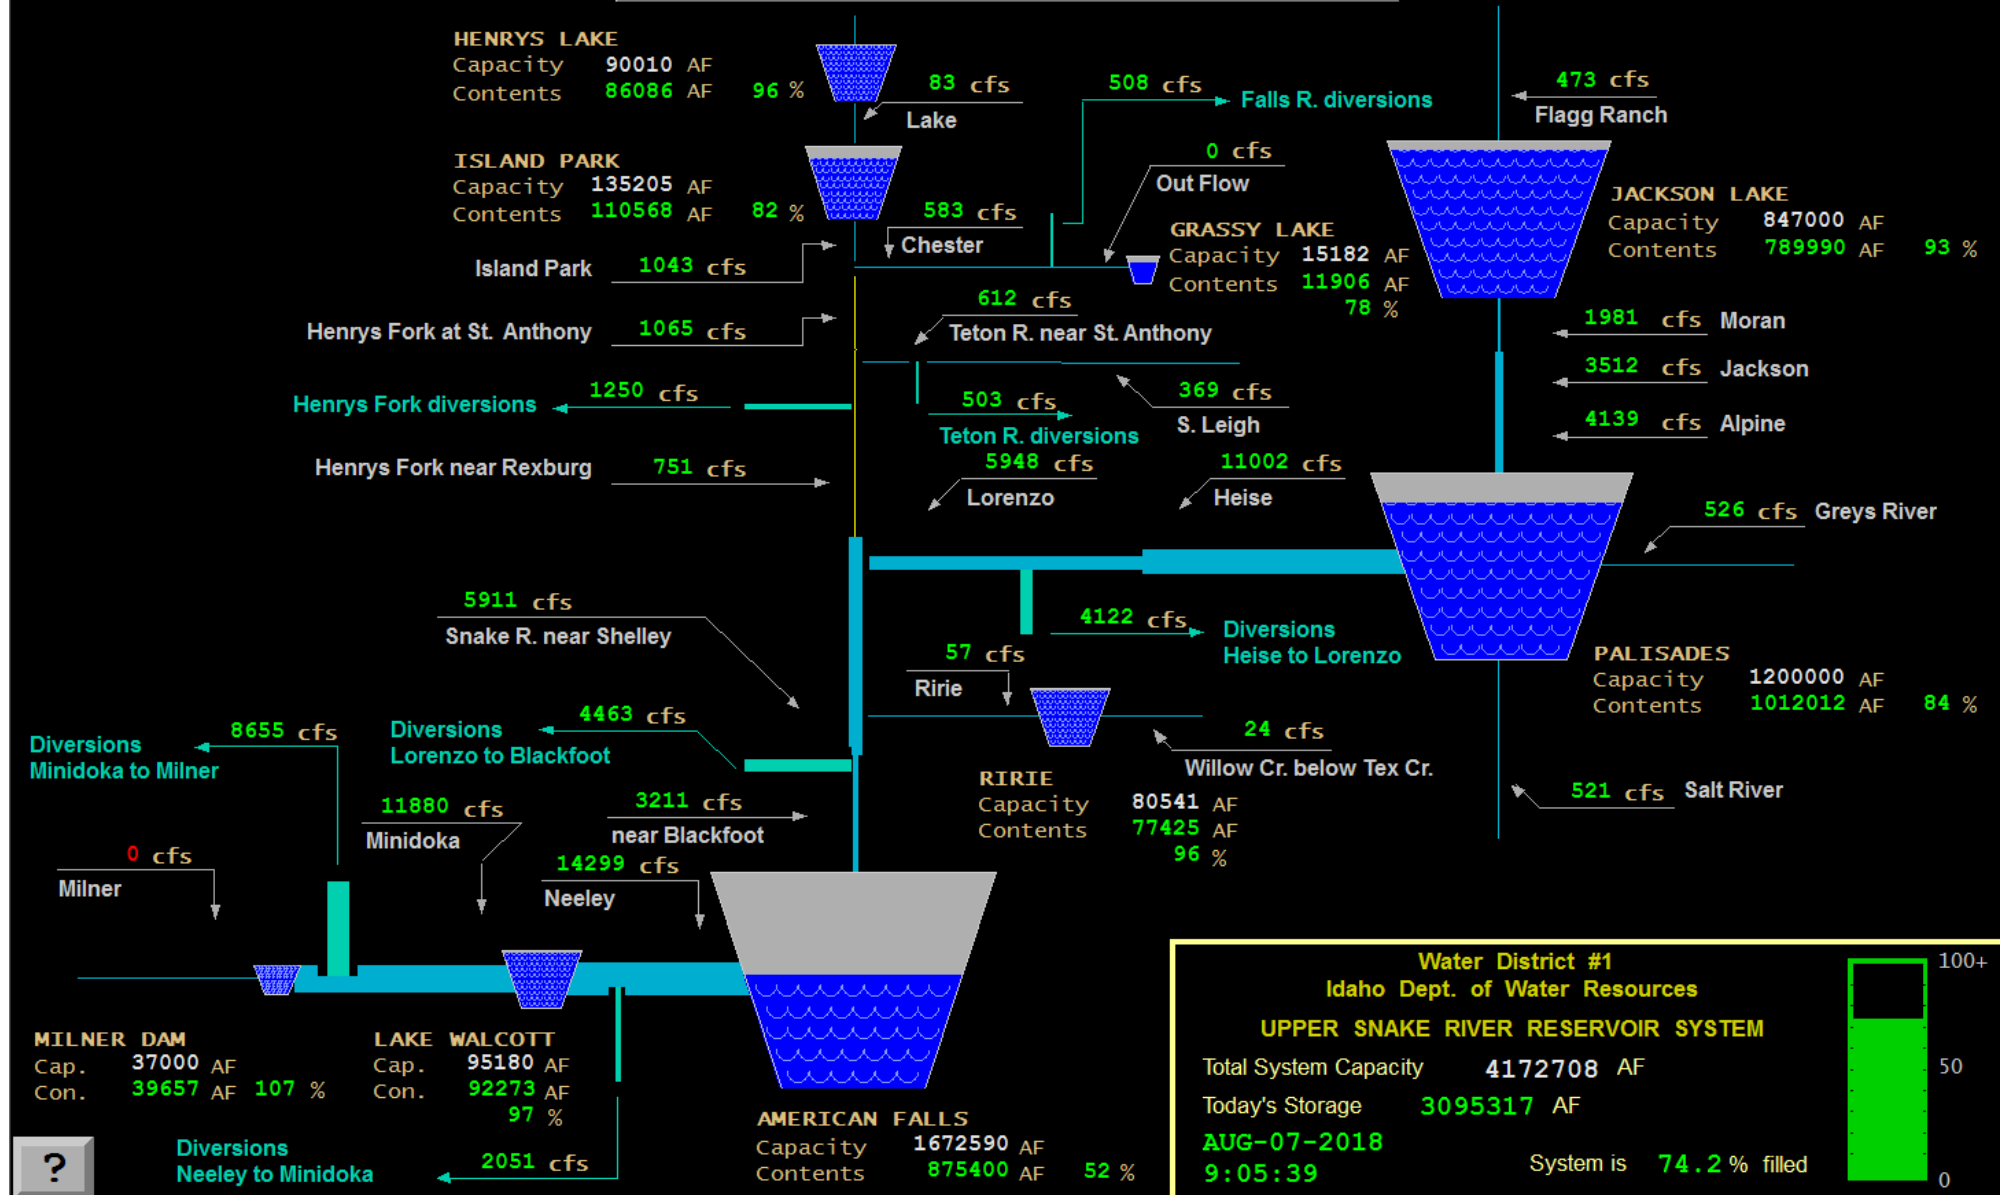

The following amounts were supplied by spaceholders to this year's 2nd Supplemental Pool (totaling 30,000 AF) and they were deducted from the AF RMNG values in the daily water right accounting. Payments (\$30.18 per AF supplied) will be sent to the supplying spaceholders within the next two weeks:

Burgess Canal	639.0 AF
Peoples Canal	2662.5 AF
